DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. **Claims 1-21** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim one provides for the use of selecting candidate entities which (1) "...satisfies the design requirement to a greater degree than another..."; and (2) "...avoids prior art to a lesser degree than another...", but, since the claim does not set forth the steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. **Claims 1-21** are rejected under 35 U.S.C. 101 because the invention as disclosed in claim one is directed to non-statutory subject matter. While the claims are in the technological arts, they are not limited to practical applications in the technological arts.

Specifically, the claim is a series of steps to be performed on a computer, but the ideas are disclosed abstractly from any particular practical application. In the aforementioned claim one, the mere process of invoking iterations is based upon selecting a candidate entity through an unclear and indefinite method of satisfying a design requirement which is “to a greater degree than another candidate” and avoiding those candidates with characteristics “to a lesser degree than another candidate”.

To constitutionally interpret the word “process”, the Supreme Court has held that: “***A process is a mode of treatment of certain materials to produce a given result. It is an act, or a series of acts, performed upon the subject matter to be transformed and reduced to a different state or thing. ***The Process requires that certain things should be done with certain substances, and in a certain order; but the tools to be used in doing this may be a secondary consequence.”(emphasis added) *Diamond, Commission of Patents and Trademarks v. Diehr and Lutton*, 209 USPQ 1, 6 (1981) quoting *Cochrane v. Deener*, 94 U.S. 780, 787-788 (1876).

This Constitutional interpretation of the word “process” is a long-standing one that the Supreme Court requires to be applied in interpreting 35 USC 101. *Diamond v. Diehr* at 6. Consequently, the use of that interpretation is Constitutionally required when we interpret the Federal Circuit’s standard that a “new and useful process” is one that produces a useful, concrete, and tangible result”. Cf. *State Street Bank & Trust Co. v. Signature Financial Group, Inc.*, 47 USPQ2d 1596, 1600-1601 (Fed. Cir. 1998).

Applicant discloses no “certain substances” that have been “transformed or reduced” in that applicant’s claims disclose no specific computer-readable medium, no manipulation of specific data representing physical objects or activities (pre-computer activity), nor do they disclose any specific independent physical acts being performed by the invention (post-computer activity). The claims merely manipulate abstract ideas in general without limitation to a practical application where “certain substances” are transformed or reduced.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. **Claim 22** is rejected under 35 U.S.C. 102(b) as being anticipated by Scepanovic et al., U.S. Patent No. 5,796,625 [hereafter Scepanovic].

As per claim 22, Scepanovic teach of an iterative computer-implemented process for creating an entity that approximately satisfies a design requirement that includes technical requirements and dissimilarity to preexisting technology, the process invoking iterations, each iteration comprising:

A. producing a structure (see column 2, lines 10-25: producing a VLSI design structure);

B. determining behavior and characteristics of the structure (see column 2, lines 26-42: iterative simulated annealing is used to over-come local optima);

Art Unit: 2121

C. comparing the structure to preexisting technology (see column 2, lines 13-25: constantly comparing the structure of optimizing characteristics); and

D. determining fitness of the structure by combining compliance with the technical requirements and dissimilarity to preexisting technology (see column 2, lines 15-54: using SA to facilitate optimizing the design respective of existing design characteristics).
